

PACKAGE WITH SNAP-LOCK LID

ABSTRACT OF THE DISCLOSURE

A clear plastic package has a generally rectangular lid and bottom, the lid having a major planar surface, and a generally vertical wall having an inverted V-shape extending along the perimeter of the major surface, and a female connecting portion extends along the outer edge of the perimeter wall, the female connecting portion providing an inverted concave groove, and a skirt portion extends downwardly from the outer edge of the female portion. The package bottom includes a major generally flat surface bounded by a perimeter wall having a U-shape, and a male connecting portion along the outer edge of the perimeter wall is shaped to be snapped into latching engagement with the female portion of the lid. When the lid is engaged with the bottom, the respective planar surfaces lie in close proximity to each other, and there are shaped cavities in these surfaces for receiving small articles of commerce.
